HR Attrition Analysis

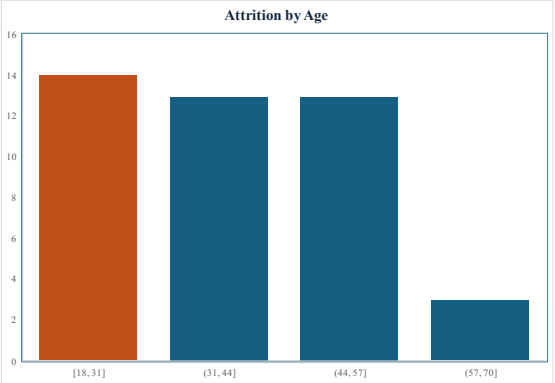

Excel dashboard on a public sample dataset of 1,470 employees (IBM HR Analytics, fictional)

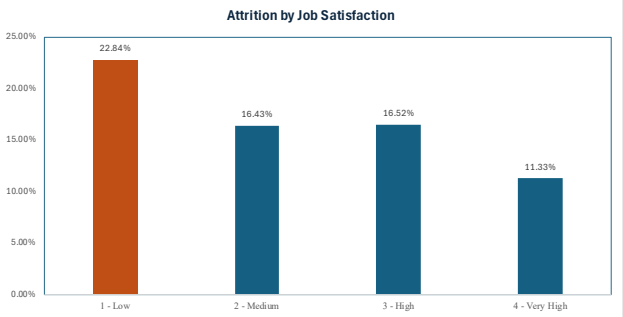

Total employees	Employees who left	Employees who stayed	Overall attrition rate
1,470	237	1,233	16.12%

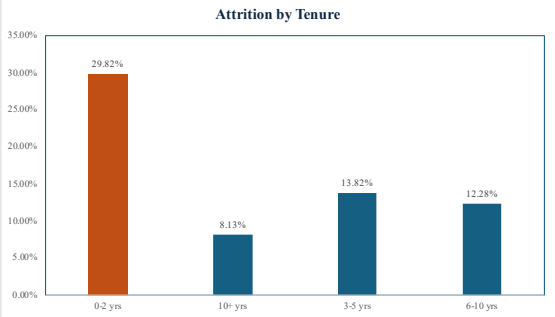

Key findings

1. Overtime: employees working overtime left at 30.5% versus 10.4% for those who did not.
2. Early tenure: employees in their first two years left at 29.8% versus 8.1% for those with 10+ years.
3. Role: Sales Representatives had the highest attrition (39.8%); Research Directors the lowest (2.5%).

Recommendations

1. Review workload and overtime in high-attrition roles, since overtime is associated with attrition nearly three times higher.
2. Prioritize onboarding and early-career retention conversations for first-year employees and Sales Representatives.
